

MaaS

Mobility as a Service (MaaS) is a new concept in the transportation industry, aiming to provide users with a seamless and efficient multimodal travel experience by integrating various modes of transport and resources into a single digital application, including public transportation, bike-sharing, taxis, ride-hailing, and car-sharing, offering users the most suitable travel plans. Additionally, MaaS is always available and integrates features such as trip planning, booking, payment, and route information, helping to improve the user travel experience.
