

Mobility as a Service (MaaS) provides services like trip planning, booking, payment, and route information for users through a digital App.

Regarding payment options, users can choose between **Pay-As-You-Go** or subscribing to **MaaS bundles** that include various transport modes and services in exchange for a monthly payment.

1

Enter your origin and destination, and let MaaS plan your journey. MaaS will consider all transport modes available and combine them to provide you with a series of good travel plans.

2

While you travel, you can use your smart device as a ticket for all transport modes in your trip, and MaaS will inform you of all helpful information like the estimated time of arrival and locations of available shared bikes.

3

When you arrive at the destination, you will be informed of the charge and can choose the pay-as-you-go option. If you like the services provided by MaaS, you can subscribe to a preferred MaaS bundle for a monthly payment to access various mobility services.
